Choose appropriate answer from the options in the questions.

 $(100 \times 1 = 100 \text{ marks})$ 

- 1. Which of the following is meant by the statement that glucose and mannose are epimers?
  - A. One is an aldose and the other is a ketose
  - B. One is a pyranose and the other is a furanose
  - C. They differ only in the configuration about one carbon atom
  - D. They are mirror images of each other

-----

- 2. Which of the following enzymes plays a direct role in the biosynthesis of collagen?
  - A. Prolyl hydrolase
  - B. Tyrosine hydrolase
  - C. Choline oxidase
  - D. Monoamine oxidase
- 3. Which of the following does not make direct use of a pH or proton gradient?
  - A. Mitochondrion

B. Chloroplast

C. Bacterial flagellum

D. Protozoan cilium

| 36. |   | ch of the following is true about a etermined by chemical means to be |                     | ar double-stranded DNA genome that percent adenosine |  |  |  |  |  |
|     | A.  | The genome is 10.5% guanosine   | B.                  | The genome is 21% guanosine                          |  |  |  |  |  |
|     | C.  | The genome is 29% guanosine   | D.                  | The genome is 58% guanosine                          |  |  |  |  |  |

| 37. |   | ne classical model of transcriptional control described by Jacob and Mono<br>repressor protein binds to |        |  |  |  |  |  |  |
|-----|---|---|--------|--|--|--|--|--|--|
|     | A.  | An enhancer   | B.     | An AUG sequence                                  |  |  |  |  |  |
|     | C.  | An operator   | D.     | A ribosome binding site                          |  |  |  |  |  |
| 38. | Whi   | _   |        | ld be expected to proceed as written?            |  |  |  |  |  |
|     | A.  | Malate + NAD <sup>+</sup> → oxaloacetate +  |        |  |  |  |  |  |  |
|     | B.  | Acetoacetate + NADH + $H^+ \rightarrow \beta$   | -hyd   | roxybuterate + NAD <sup>+</sup>                  |  |  |  |  |  |
|     | C.  | Pyruvate + $\beta$ -hydroxybuterate -   | → lac  | ctate + acetoacetate                             |  |  |  |  |  |
|     | D.  | Malate + pyruvate → oxaloaceta  | te + I | actate   |  |  |  |  |  |
| 39. | Plants and some bacteria differ from animals in that plants and some bacteria can |   |        |  |  |  |  |  |  |
|     | A.  | Form polymers from glucose  |        |  |  |  |  |  |  |
|     | B.  | Use carbon dioxide to increase their biomass  |        |  |  |  |  |  |  |
|     |   | Produce NADH via reductive reactions  |        |  |  |  |  |  |  |
|     | D.  | Synthesize glutamate and asparta  | ate    |  |  |  |  |  |  |
| 40. |   | vation of intracellular inositol triplich of the following organelles?                                  | nospl  | hate results in release of Ca <sup>2+</sup> from |  |  |  |  |  |
|     | A.  | Peroxisome  | B.     | Lysosome   |  |  |  |  |  |
|     | C.  | Nucleus   | D.     | Smooth endoplasmic reticulum                     |  |  |  |  |  |
| 41. | All   | of the following are true about heter   | otrin  | neric G proteins except                          |  |  |  |  |  |
|     | A.  | They bind either GDP or GTP   | B.     | They phosphorylate proteins                      |  |  |  |  |  |
|     | C.  | They have GTPase activity   | D.     | They act as binary switches                      |  |  |  |  |  |
| 42. |   | completion of the S phase of the of the following except  | cell c | ycle of a mammalian cell is marked by            |  |  |  |  |  |
|     | A.  | Histone content of the cell is doub   | oled t | hat of cells in G₁                               |  |  |  |  |  |
|     | B.  | In replicated DNA, newly incorpor   | ated   | bases are paired with parental bases             |  |  |  |  |  |
|     | C.  | Sister chromatids disjoin from one  | e and  | other  |  |  |  |  |  |
|     | D.  | Each replicated chromosome has  | four   | telomeres  |  |  |  |  |  |
|     |   | 8   | 3      | T _ 2114   |  |  |  |  |  |

| 43. | 'Zinc fingers' are important in cellular regulation because they are  A. At the catalytic site of many kinases  B. A structural motif in many DNA- binding proteins  C. Structures with high redox potential  D. Characteristic of palindromic stretches of unique-sequence DNA |   |        |   |  |  |  |  |
|-----|---|---|--------|---|--|--|--|--|
| 44. |   | ch of the following types of bor<br>lived in stabilizing the three- dimen   |        | or interactions are least likely to be<br>al folding of most proteins?      |  |  |  |  |
|     | A.  | Hydrogen bonds  | B.     | Ester bonds   |  |  |  |  |
|     | C.  | Disulfide bonds   | D.     | Hydrophobic interactions  |  |  |  |  |
| 45. | In a  | nimals, an enzyme unique to gluco   | neog   | enesis is   |  |  |  |  |
|     | A.  | Enolase   | B.     | Aldolase  |  |  |  |  |
|     | C.  | Phosphoglyceromutase  | D.     | Fructose 1 ,6-biphosphatase   |  |  |  |  |
| 46. |   | proximately how many moles of $A$ lation of one mole of FADH $_2$ in an $A$ |        | will be generated as a result of the ely respiring mitochondrion?           |  |  |  |  |
|     | A.  | 0   | B.     | 2.0   |  |  |  |  |
|     | C.  | 3.0   | D.     | 4.5   |  |  |  |  |
| 47. |   | •   |        | l membrane protein contains four<br>ectin-like repeats. It is most likely a |  |  |  |  |
|     | A.  | Cell adhesion molecule  | B.     | Hormone-responsive ion channel  |  |  |  |  |
|     | C.  | G protein   | D.     | Transcription factor  |  |  |  |  |

- 66. The following is not true about DNA synthesis:
  - A. It requires DNA polymerase
  - B. Reverse transcriptase enzymes are involved
  - C. Moves in a 5'---> 3' direction
  - D. Cytarabine inhibits DNA synthesis
- 67. With regard to DNA molecules:
  - A. They contain adenine, cytosine, guanine and uracil bases
  - B. They can be detected with Western blotting
  - C. They cannot be detected with Southern blotting
  - D. They are denatured at temperature of 100°C
- 68. G-proteins:
  - A. Can be mutated in tumour cells
  - B. They are inactivated by cholera toxins
  - C. Mediate the action of glucocorticoid hormone
  - D. Bind to DNA to regulate gene transcription
- 69. The following is true about gluconeogenesis:
  - A. It occurs in liver B. It is inhibited by glucagon
  - C. It occurs in adipose tissue D. It is stimulated by insulin
- 70. With regard to membrane receptors for hormones:
  - A. They are not glycoproteins
  - B. They are important for hormones made up of steroid
  - C. Those for insulin exhibit an intrinsic protein kinase activity
  - D. Glucagon uses calcium as a second messenger
- 71. With regard to histones, the following is not true:
  - A. The amino acid composition of histones show great variability amongst different human races
  - B. Mitochondria do not contain histones
  - C. They are essential for the formation of stable DNA
  - D. They are basic proteins

### 72. In the regulation of genes, the following is not true:

- A. More than 90% of the base sequences in human DNA have not known function
- B. Extrons are the part of the gene that code for amino acids found in the final proteins
- C. Splicing cut out the mRNA coded by introns
- D. Introns usually begins with the nucleotide sequence GT

### 73. Thromboxane $A_2(TXA_2)$ :

- A. Does not require lipoxygenase for its production
- B. Is not derived from the membrane phospholipid
- C. Its production is not decreased by non-steroidal anti-inflammatory drugs
- D. Does not cause platelet aggregation

### 74. In the eye lens:

- A. Pentose phosphate pathway metabolizes 30% of the available glucose
- B. The capsule is not made up of type IV collagen
- C. Most metabolism is not carried out in the anterior pole
- D. Anaerobic glycolysis is not the main source of energy

#### 75. The following is not true about the oxidation of glucose:

- A. Glycolysis produces 3% of the energy ultimately obtained from glucose
- B. Glucose does not enter the Kreb's cycle as pyruvate
- C. Glycolysis occurs within the mitochondria
- D. The first stage of glycolysis involves phosphorylation of glucose to 1,6 fructose biphoshate

| 76. |             | made | the | protocol | of | keeping | tissues | and | organs | alive | outside |
|-----|-------------|------|-----|----------|----|---------|---------|-----|--------|-------|---------|
|     | animal body |      |     |          |    |         |         |     |        |       |         |

A. H G Khorana

B. Sidney Ringer

C. A Waksman

D. Linus Pauling

| 77. | Pyramid of biomass in pond ecosystem is   |                          |    |                   |  |  |  |
|-----|---|--------------------------|----|-------------------|--|--|--|

|     | C.  | Apoenzyme                | D. | Coenzyme          |  |  |  |
| 79. | Which of the following is not a herbicide?  |                          |    |                   |  |  |  |
|     | A.  | Collego                  | B. | Devine            |  |  |  |
|     | C.  | Biochon                  | D. | None              |  |  |  |
| 80. | The optimum temperature for wine- fermentation of fruit juice is                    |                          |    |                   |  |  |  |
|     | A.  | 10°F                     | B. | 110°F             |  |  |  |
|     | C.  | 120°F                    | D. | 68°F              |  |  |  |
| 81. | Volume of urine is regulated by   |                          |    |                   |  |  |  |
|     | A.  | Aldosterone              |    |                   |  |  |  |
|     | B.  | B. Aldosterone and ADH   |    |                   |  |  |  |
|     | C. Aldosterone, ADH and testosterone  |                          |    |                   |  |  |  |
|     | D.  | ADH                      |    |                   |  |  |  |
| 82. | Receptors of pain are known as  |                          |    |                   |  |  |  |
|     | A.  | Rheoreceptors            | B. | Algesireceptors   |  |  |  |
|     | C.  | Tangoreceptors           | D. | Mehanocerptors    |  |  |  |
| 83. | Wine yeast is   |                          |    |                   |  |  |  |
|     | A.  | Saccharomyces cerevisiae | B. | S. ellipsoids     |  |  |  |
|     | C.  | Cryptococcus             | D. | None of the above |  |  |  |
| 84. | The branch of science dealing with death is called                                  |                          |    |                   |  |  |  |
|     | A.  | Thanatology              | B. | Teratology        |  |  |  |
|     | C.  | Toxicology               | D. | Tricology         |  |  |  |

| 85. | The antibiotic gentamycin is produced from        |  |      |   |  |  |  |  |
|-----|---|--|------|---|--|--|--|--|
|     | A.  | Micromonosperma purpurea                             | B.   | Streptomyces griseus                              |  |  |  |  |
|     | C.  | Penicillium notatum                                  | D.   | None above  |  |  |  |  |
| 86. | Cell organelle related tophotorespiration is      |  |      |   |  |  |  |  |
|     | A. Peroxisome                                     |  | B.   | Ribosome  |  |  |  |  |
|     | C.  | Lysosome   | D.   | Lyposome  |  |  |  |  |
| 87. |   | obic respiration produces more nentation involves    | e ei | nergy than fermentation because                   |  |  |  |  |
|     | A.  | Alcohol production                                   | B.   | Formation of CO <sub>2</sub> and H <sub>2</sub> O |  |  |  |  |
|     | C.  | Incomplete oxidation of food                         | D.   | Formation of acid                                 |  |  |  |  |
| 88. | The best source of Vit C among the following is   |  |      |   |  |  |  |  |
|     | A.  | Glycine max  | B.   | Arachis hypogeal                                  |  |  |  |  |
|     | C.  | Emblica officinalis                                  | D.   | Mangifera indica                                  |  |  |  |  |
| 89. | An antiserum would contain                        |  |      |   |  |  |  |  |
|     | A. Antigens                                       |  | B.   | Antibodies  |  |  |  |  |
|     | C.  | Leucocytes   | D.   | RBCs  |  |  |  |  |
| 90. | A condition of failure of kidney to form urine is |  |      |   |  |  |  |  |
|     | A.  | Creatinine   | B.   | Hematuris   |  |  |  |  |
|     | C.  | Anuria   | D.   | Ketouria  |  |  |  |  |
| 91. | Insulin is secreted by                            |  |      |   |  |  |  |  |
|     | A.  | Spleen   |      |   |  |  |  |  |
|     | B.  | 3. $lpha$ -cells of islets of langerhans of pancreas |      |   |  |  |  |  |
|     | C.  | eta -cells of islets of langerhans of pancreas       |      |   |  |  |  |  |
|     | D.  | Mucosa of oesophagus                                 |      |   |  |  |  |  |
| 92. | The virus that infects bacteria are called        |  |      |   |  |  |  |  |
|     | A.  | Mycophage  | B.   | Bacteriophage                                     |  |  |  |  |
|     | C.  | HIV  | D.   | Retrovirus  |  |  |  |  |

| 93.  | <ol><li>The chemicals that are produced by host plants due to infection as a de<br/>reaction to pathogen are called</li></ol> |                              |    | plants due to infection as a defense |  |  |
|------|---|------------------------------|----|--------------------------------------|--|--|
|      | A.  | Phytotoxins                  | B. | Toxins                               |  |  |
|      | C.  | Phytotrons                   | D. | Phytoalexins                         |  |  |
| 94.  | Anti-   | -viral substance is          |    |                                      |  |  |
|      | A.  | Antigen                      | B. | Antibody                             |  |  |
|      | C.  | Interferon                   | D. | Antibiotic                           |  |  |
| 95.  | Which one of the following is biodegradable?  |                              |    |                                      |  |  |
|      | A.  | PVC                          | B. | Asbestos                             |  |  |
|      | C.  | Sewage                       | D. | Polythene                            |  |  |
| 96.  | Trea  | atment with alloxan destroys |    |                                      |  |  |
|      | A.  | Stilt cells                  | B. | eta - cells of langerhans            |  |  |
|      | C.  | Sertoli cells                | D. | Cells of leudig                      |  |  |
| 97.  | Polygenic genes show  |                              |    |                                      |  |  |
|      | A.  | Similar genotypes            | B. | Different phenotypes                 |  |  |
|      | C.  | Different karyotypes         | D. | Different genotypes                  |  |  |
| 98.  | The enzyme responsible for the reduction of molecular nitrogen to ammonia in legume root nodules                              |                              |    |                                      |  |  |
|      | A.  | Nitrogenase                  | B. | Nitrate reductase                    |  |  |
|      | C.  | Nitrite reductase            | D. | Amminase                             |  |  |
| 99.  | Okazaki fragments form  |                              |    |                                      |  |  |
|      | A.  | Leading strand               | B. | Lagging strand                       |  |  |
|      | C.  | Non-sense strands            | D. | Sense strand                         |  |  |
| 100. | The drug belladonna is obtained from  |                              |    |                                      |  |  |
|      | A.  | Atropa                       | B. | Opium                                |  |  |
|      | C.  | Rauwolfia                    | D. | Solanum                              |  |  |
|      |   |                              |    |                                      |  |  |
